

EXA SYSTEMS AND PROJECT MANAGEMENT

A team that meets your expectations

At EXA Systems, each project is unique and we make sure to provide the highest quality solution to our clients.

EXA Systems' consultants have been working in the supply chain industry for many years. They have acquired experience with many companies in different fields of activity. When you want to improve your productivity and performance in logistics, our consultants can assist you in establishing the best business practices in your company.

A project manager leads each project and follows a well established and documented process based on GAMP/PMMI guidelines. The project manager's goal is to optimize the quality triangle by meeting every requirement, on time and within budget. The use of the project planning module in our SAP Business One ERP allows us to see in real time the complete status of the project, its schedule and its capabilities.
